Acknowledgement

The Fifth Integrated Household Living Conditions Survey (EICV5) was conducted from October 2016 to October 2017, and is designed to provide accurate and up-to-date information that are useful to government, analysts, and the public as they seek to monitor and evaluate efforts to reduce poverty.

The NISR now conducts EICV surveys every three years, and this has been made possible by strong collaboration and support from our stakeholders, who are as interested as we are in supporting evidence-based decision making, and planning processes that are grounded on reliable and valid statistics.

We sincerely appreciate the support given by the Government of Rwanda for the development of statistics in the country, and are grateful for the help that we continue to receive from all government institutions.

We are most grateful to our development partners for the support that they have given for the collection and development of statistics in Rwanda, and especially for EICV5. They include UK Aid, the European Union, the World Bank, and the UN partners in the country.

The measurement and analysis of poverty and living standards is an exercise that requires considerable technical skills. We would like to thank NISR technical and management team for their work - from the planning and implementation of EICV5 through the analysis and publication of the results. We further appreciate the valuable technical support provided by the international experts. The generation and use of complex survey data can only be achieved through teamwork.

Yusuf Murangwa
Director General, NISR

Important technical notes for data users

The EICV5 has three main components: cross-sectional sample of households, VUP Panel Survey receiving VUP benefits and EICV5 Panel Survey. The EICV5 cross-sectional survey is designed to represent the current household-based population of Rwanda. The NISR national master sampling frame was used for selecting the sample villages in each district. This master sample was based on the 2012 Rwanda Census frame. The villages were selected for the Master Sample, stratified by district. Within each district the sample villages were selected systematically with probability proportional to size (PPS), where the measure of size was based on the number of households in each village from the 2012 Census frame. Within each district the villages in the master sampling frame were not explicitly stratified by urban and rural areas. However, the frame of villages within each district was ordered by urban and rural codes, and the systematic selection of the sample villages (with PPS) provides an implicit stratification of the Master Sample by urban and rural areas within each district, with a proportional allocation of the sample villages to each stratum.

Similar to the EICV4 cross-sectional survey methodology, a nationally-representative sample of clusters was assigned for the EICV5 data collection each cycle out 10 cycles, so that the sample is geographically representative over time. This process ensured that the final distribution of the sample clusters to cycles and sub-cycles was geographically representative within each district.

The objectives of the EICV5 Panel Survey are to measure the trends in key socioeconomic indicators over time for a nationally representative panel of households. The baseline survey was EICV3, and in EICV4 the panel households which moved or split were tracked and interviewed at their new location. The Panel Survey includes the panel households that remained in the original sample villages, and the split households that were tracked in EICV4. Any panel households that moved or split from this initial sample of panel households in EICV5 were also tracked. However, the additional tracking will be limited to following the original eligible members (13 years or older in EICV3, with relationship being: Household Head, Spouse of household head, son/daughter of household head, or step child/ adopted child of household head) of the EICV3 panel households.

The main objective of the VUP Panel Survey is to provide longitudinal data for a nationally-representative panel of households that received VUP benefits at the time of the EICV4, in order to obtain reliable estimates of trends in the socioeconomic indicators for these households. The VUP Survey conducted with EICV4 was based on a sample of 2,460 households selected from the VUP administrative frame using a stratified two-stage sample design. However, only the sample households indicated that they were receiving VUP benefits at the time of the EICV4 survey were considered to be the sample for the VUP Panel Survey.

If the entire household moved or an eligible member moved, it was necessary to identify their new address so that they can be tracked there. The eligibility criteria for household members to be tracked and the tracking procedures are similar to those used for the EICV5 Panel Survey.

Regarding data collection, the NISR collected the data for the EICV5 cross-sectional, VUP panel and EICV5 panel surveys using computer-assisted personal interviewing (CAPI) with computer tablets for the first time using the same questionnaire, including the listing operation.

Rounding of estimates

Estimates presented in the tables are shown rounded to one decimal place. To improve readability, estimates referred to in the interpretation of results have been rounded to the nearest integer, except for the discussion of relatively small percentages. Moreover, estimates of total population or total number of households are shown in tables expressed in '000's. Due to the rounding, the sum of subpopulation totals (e.g. Provinces or age groups) can be minimally different from the total population estimated at national level.

Consumption quintiles

The results are presented by quintile. Quintiles are developed by sorting the sample of households by annual consumption values, and then dividing the population into five equal shares. The 20% of individuals with the highest annual consumption are allocated to quintile 5, and the 20% of individuals with the lowest levels of annual consumption are allocated to quintile 1. The poorest households and their members are found in quintile 1 and the richest are found in quintile 5.

Consumption is used as a proxy for income, as is usual when estimating poverty. Quintiles are a relative measure of individuals' consumption in comparison to the rest of the population during a specific period.

Executive Summary

Background to the EICV5 and the EICV series

This report presents and discusses detailed results from EICV5. It focuses on youth and compares EICV5 and EICV4 in the areas of demography, education, Information and Communication Technology, economic activity, poverty and migration.

The EICV5 survey was conducted over a period of 12 months between October 2016 and October 2017. Having taken place three years after the EICV4 (October 2013 to October 2014), the EICV5 aimed to provide even more timely evidence to support policy-making, continuous evaluation of various development programs, including first National Strategy for Transformation (NST1), SDGs, etc. .

The EICV methodology has remained practically unchanged since 2000/01. This allows calculating indicators in a consistent way for more than one survey round to investigate trends and inform the planning framework of development programs such as NST1, SDGs, EAC Vision 2050, AU Agenda 2063.

In this report, most of tables provide the results on youth population from both EICV5 and EICV4 and help to explore trend over time, as well as different patterns across the provinces, urban and rural areas of Rwanda. Being one of six thematic reports, namely, Youth, Economic Activity, Utilities and amenities, Education, Environment and Natural Resources and Gender, this report seeks to inform and support the monitoring of NST1 with data on the youth.

In Rwanda youth was defined as the population aged from 14 to 35 years before 2015. Since then, the new national youth policy revised youth age range to be 16 to 30 years. The priority of the Government of Rwanda for the youth is around job creation and self-employment. This report thus focuses on education, migration, poverty status and employment situation of young people. It also looks at geographical mobility of young people as one of key factors in determining access to employment.

Demography

The analysis of EICV5 considered three age groups, namely, 16–20 years, 21–25 years, and 26–30 years. The total youth population in 2016/17 was 3,165,000. It increased from 3,151,000 in 2013/14.

Overall, youth population (16-30 years) makes up 26.6% of the total population of Rwanda. The largest age group in youth was 16-20 years, which comprises 10.2% of the total population. The age group 21-25 years comprises 8.4% of the total population and finally 26-30 years group represents 8.0% of the total population.

The sex ratio of youth in Rwanda is 92 males for 100 females. The sex ratio decreases as age increases.

Education

Around 85% of the population aged 16-30 years know how to read and write. This varies from 71.6% for those in the lowest quintile to 93% in the highest quintile. At provincial level, Kigali city had the highest literacy rate of 91.4%. Further, the literacy rate was higher in urban (91.5%) than in rural (82.3%).

The results also showed that 3.1% of youth have attended technical or vocational school, with more female (3.3%) attending technical or vocational school than male (2.9%).

Information and Communication Technology

Computer Literacy rate among youth in Rwanda was 13.1%, only 8% in rural areas feel confident about using computer compared by 28.5% in urban. The computer literacy is high in Kigali (26.9%) and among the wealthiest quintile (30.9%).

The mobile ownership among youth in Rwanda is 47.9% in 2016/17, the proportion increased from 44.4% in 2013/14. In urban areas, about 71% of youth population had mobile phone compared to 40.4% in rural areas. The mobile ownership increases from the lowest quintile (24.1%) to in the highest quintile (73%).

Economic Activity

The overall, proportion of youth who work was 77.2% and 16% were students. The proportion of youth seeking work seven days before the survey was higher for female (3.5%), compared to males (1.9%).

Median hours worked by the youth in Rwanda are 30 hours per week and the mean hours worked per week are 35 hours. It is apparent that 58.4% of young people work less than 35 hours per week and they might be considered as underemployed. About 13.2% work at least 10 hours and 22.2 % work more than 51 hours per week.

Most young people (45%) are independent farmers as their main job, the next common categories of main usual jobs for youth is wage non farmer (28.1%), wage farm (16.3%) and independent non farmer (9.3%).

The main pattern shows a decrease in the number of males in wage farming, from 9.8% for 16-20 years old people to just 16.9% for 26-30 years old people. The majority of youth in wage work are employed in private sector (97.6%) and only few (2%) work in public sector. Further, an important proportion of young people work in agriculture, forestry and fishing as their main job (62.2%). The second source of main jobs is in wholesale and retail trade, repair of motor vehicles and motorcycles (10.2%) for both male and female youth.

Migration

Overall, 22.2% of young population migrated internally or outside the country in the last five years preceding the EICV5 survey. Migration has increased over time from 19.8% in 2013/14. The migration rate was high in elder age groups compared to young age groups.

During the five years preceding EICV5 survey, the majority of youth migrated due to work reasons (51.2%) while 33.5% moved due to family reasons. Among those who migrated due to family reasons, the big proportion (39.5%) came from 16-20 years age group.

Chapter 1: Introduction

The first National Strategy for Transformation (2017-2024) mainstreams a system of monitoring and evaluation at national, provincial, district and sector levels of the government's socio-economic performance vis-a-vis the country's long term development aspirations as embodied in Rwanda Vision 2020 and Vision 2050. National Strategy for Transformation (NST) and vision 2050 aim at increasing the Economic growth with the main objective of speeding up Rwanda's progress towards an upper middle income country by 2035.

The evidence collected through the EICV5 fieldwork which was carried out by the NISR between October 2016 and October 2017 provided a key input into the evaluation of the development programs such as: Vision 2020, First National Strategy for Transformation, Sustainable Development Goals, Vision 2050, AU Agenda and EAC Vision 2050.

In Rwanda youth was defined as the population aged 14 to 35 years before 2015. Since then, the new national youth policy defines youth as the population whose age is between 16 and 30 years. Therefore in this report youth related indicators in EICV4 were recomputed to facilitate comparisons with EICV5.

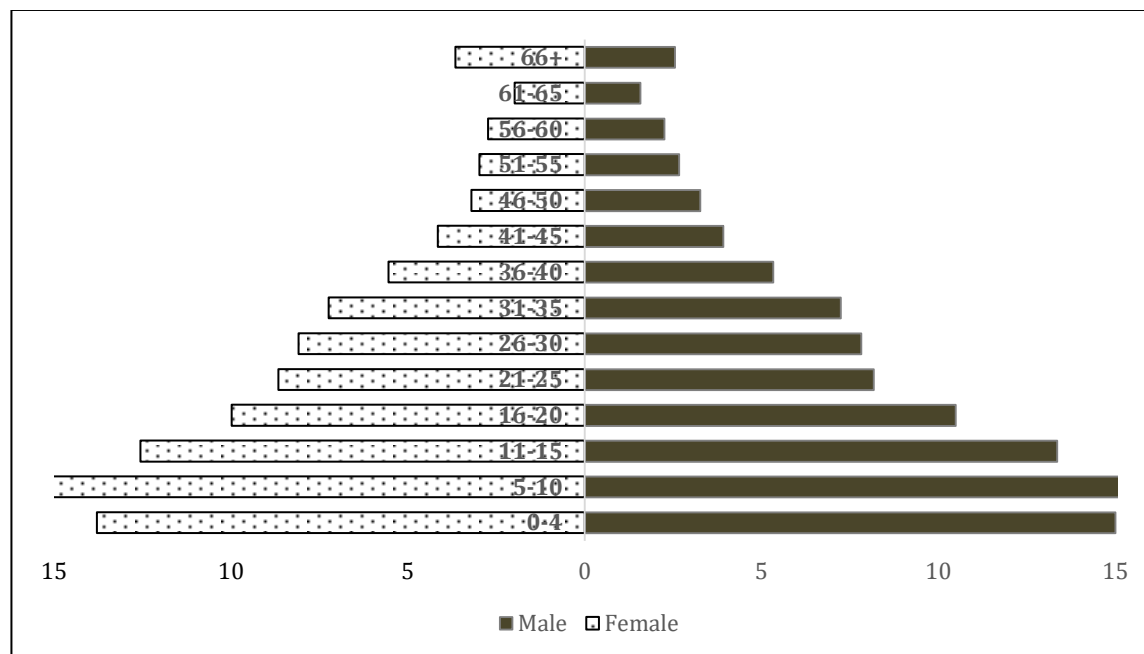

This report is one of six different thematic reports from EICV5, namely, Youth, Economic Activity, Utilities and amenities, Education, Environment and Natural Resources and Gender, Reports, which will play key role in the final evaluation of EDPRS2 and evaluation of the National Strategy for Transformation. The focus of the study being on the situation of the youth in Rwanda, particularly geographical mobility, education, economic activities, as well as demographic features of young people in Rwanda. It also looks at geographical mobility of young people as one of key factors in determining access to employment. Particularly, the priority of the Government of Rwanda is around job creation and self-employment of young population.

Information Communication Technology (ICT) chapter was added in this report for the first time to facilitate users to understand the ICT situation among youth in Rwanda. Education chapter was also improved by adding the access to education and numeracy rate among youth.

Chapter 2: Demography

According to EICV 5 results, the total youth population in Rwanda, in the age range 16-30 years, increased from 3,151,000 in 2013/14 to 3,165,000 in 2016/17.

Figure 2. 1: Percentage Distribution of Population by age groups and Sex, EICV5.

Source: EICV5

The study reveals that the proportion of youth increased slightly since EICV4. However, there has been a slight decrease in the proportion of youth in 21–25 age group, from 8.9% (EICV4) to 8.4% (EICV5). Overall, people age between 16 to 30 years make 26.6% of the total population of Rwanda of all ages in EICV5. Table 2.1 underline that the largest age group within the youth is 16–20 years, representing 10.2% of the total youth population, while the lowest age group is 26-30 years (8.0%).

Source: EICV4 & EICV5

Kigali City is the province with the highest prevalence of youth (36.5%) than others, the lowest is southern province (24.3%) and the prevalence of youth in Rwanda is 26.6%. Table 2.2 illustrates the distribution of youth and non-youth by Province in Rwanda.

Table 2. 2: Percentage of youth by province (EICV5, EICV4)

Table 2.3 shows the sex ratio of youth population in Rwanda. There are 92 youth males to 100 youth females in Rwanda. Urban areas have 95 males for every 100 females this is higher compared to rural areas (91 males to 100 females). The age group that has the highest sex ratio is 16-20 years with 97 males per 100 females.

Chapter 3: Education

3.1 Literacy

The literacy rate was measured by finding out whether a household member aged 10 years or above could read or write a letter or a simple note. Table 3.1 shows that 84.6 % of the youth population knows how to read and write. This varies from 71.6% for those in the lowest quintile to 93% for those in the highest quintile.

Overall there is a slight difference among males (84.2%) and females (85%) literacy rates, with higher rate in urban areas (91.5%) compared to rural areas (82.3%). The literacy rate is higher in Kigali City compared to other provinces. A small increase has been noticed at national level, from 83.5% in 2013/2014 to 84.6% in 2016/2017.

Table 3. 1 Literacy rate (%) among youth population by province, urban/rural and consumption quintile (EICV5, EICV4)

3.2 Access to education

Table 3.3 shows that 3.1% of youth had attended technical or vocational school this number had decreased compared to 4.1% in 2013/2014. The urban population (4.2%) had more youth that had attended technical and vocational school compared to the rural youth population (2.8%). Kigali City has a high percentage (4%) of youth who had attended technical and vocational school compared to other provinces and wealthier quintiles dominate in vocational trainings.

Source: EICV4 & EICV5

Table 3.4 shows that 95.5 % of the youth population have attended school. This varies from 91.4% for those in the lowest quintile to 97.5% for those in the highest quintile. Overall there is a slight difference between males (95.7%) and females (95.4%) school attendance, with higher rate in urban areas (97%) compared to rural areas (94.2%).

Table 3.5 indicates that nationwide, the population attending the tertiary education continues to grow as it augmented approximately from 3.0% in EICV4 to 3.1% in EICV5 with a 3.3% change.

At the province level, Kigali city continues to have the highest tertiary school attendance (about 8%) however, relative advances can be observed throughout all the other provinces, especially the Western (from 1.5% in EICV4 to 2.0% in EICV5).

With regards to consumption quintiles, the pattern relatively stayed the same as the one observed in 2013/14, EICV5 results reveal that access to university education remains completely skewed to individuals in the wealthiest quintile (Q5) (8.5% from 7.8%) The poorest consumption (Q1) recorded the lowest proportion (0.1%).

Chapter 4: Information and Communication Technology

This chapter discusses the computer literacy, ICT skills, mobile phone ownership among youth in Rwanda and usage rate of public internet services.

Table 4.1 shows that 13.1% of the population aged 16-30 are computer literate in 2016/2017. The computer literacy among youth increased from 12.4% in 2013/2014 to 13.1% in 2016/2017. Male were reported to be more computer literate (14.8%) compared to female (11.5%). The computer literacy was high in urban areas (28.5%) compared to rural areas (8%). Kigali city had the highest percentage of computer literate youth (26.9%) and wealthier consumption quintiles dominate in computer literacy.

Results in Table 4.4 shows the use of public internet facilities among youth population in Rwanda. At the national level, the usage rate of public internet facilities decreased from 9.4% in 2013/2014 to 5.6% in 2016/2017. In addition about 75.7% never used it at all in 2016/2017, and 18.7% were not aware of the internet services. Youth in Kigali City were most likely to use Internet facilities compared to youth in other provinces. The Public internet use was high in Urban areas (12.2%) compared to Rural areas (3.5%).

Chapter 5: Economic activity

This chapter provides information about the distribution of youth by usual economic activity, hours worked by youth, main usual jobs of youth, youth working for wage by economic sectors, youth living below poverty line and youth living in extreme poverty.

5.1 Employment and economic activities

The overall proportion of youth who work was 77.2% where 16% were students. As an individual gets older the chance of getting the work increases in both sexes. More females (2.9%) are domestic workers across all age groups compared to males (1.8%). The percent youth who worked decreased from 79.1% in 2013/14 to 77.2% in 2016/17 as shown in table 5.1.

Table 5. 1: Distribution of youth by usual economic activity status (EICV5, EICV4)

Table 5.5 indicates that about 45% of young people in Rwanda are independent farmers as their main job, 28.1% are wage non-farm workers, 16.3% have wage farm jobs and about 9.3% are independent non-farmers. The main pattern is an increase in the number of males in wage farming activities, from 9.8% for 16-20 years category to just 16.9% for 26 - 30 years category. But there are more female independent farmers compared to males across all age groups.

Results in Table 5.6 indicates that Kigali City has a high number of youth, both males (77.3%) and females (59.8%) in wage non farm jobs in 2016/17 and there are remarkable differences between provinces. Generally, there are more males (38.5%) than females (18.6%) in wage non farm jobs. Overall, the youth in non farm jobs increased from 24.2% in 2013/14 to 28.1% in 2016/17.

Results in Figure 5.1 shows the type of jobs young graduates are transitioned to after their studies. The majority of lower secondary (53%) and upper secondary (34.3%) of young graduates are independent farmers while the majority of university young graduates (79.8%) work in paid nonfarm jobs. The pattern is the same in EICV4. Overall, as the level of education increases the youth involved in wage non farm jobs increases considerably.

Table 5.7 presents the distribution of working youth per institutional sector. Among the youth working in waged employment, the majority (97.6%) work in the private sector and 2% in the public sector. The youth employed in private sector increased from 93% in 2013/14 to 97.6% in 2016/17.

Table 5.8 indicates that 62.2% of young people work in agriculture, forestry and fishing as their main job. For males, this proportion decreases for older age groups from 64.5% (16–20 years old) to 46.5% (26–30 years old). This pattern reverses for female as the proportion increases in older age groups from 52.2% (16–20 years old) to 62.2% (26–30 years old). According to EICV5, wholesale and retail trade, repair of motor vehicles and motorcycles is the second main source of employment (10.2%) after agriculture, forestry and fishing for both males and females.

5.2 Poverty in Rwanda

Poverty in Rwanda is measured by household consumption per adult equivalent member. The value of consumption is measured at the household level, and divided by the number of people in the household (with an adjustment for children). As it is done in most countries, a line is set based on what is considered to be required for a basic minimum level of consumption and below this line people are considered to be in poverty. The poverty line in Rwanda is RWF 159,375 per adult equivalent per year (in January 2014 prices), that is the share of the population that cannot afford to buy a basic basket of goods (food and nonfood). While food poverty line is RWF 105,064 per adult equivalent per year (January 2014 prices).

Overall, the results in Table 5.10 shows that about 29.5% of young people live in households that are below poverty line, which is slightly below the national average for all ages (38.2%). In all age groups, females are more likely to be poorer than males. Overall, the proportion of young people below the poverty line decreased from 30% in 2013/14 to 29.6% in 2016/17.

Table 5.10: Proportion of young people below poverty line (EICV5, EICV4)

Below Poverty line								
Age group (years)	EICV4				EICV5			
	Male	Female	Overall	Total Population (000s)	Male	Female	Overall	Total Population (000s)

Total (16-30)	28.7	31.2	30.0	3,151	27.8	31.2	29.6	3,165

Source: EICV5& EICV4

People who cannot afford buying minimum basket of food needed to be healthy are considered to be extremely poor. The rate of extreme poverty among youth (16-30) is 11.3% compared to the 16% at the national level for all ages. It is clear in Table 5.11, that more females were extremely poor (12%) compared to males (10.4%) in 2016/17.

The youth in extreme poverty increased slightly from 11.2% to 11.3% between the two EICVs.

Table 5. 11: Proportion of young people in extreme poverty (EICV5, EICV4)

Extreme Poverty

Chapter 6: Migration

Internal migration between districts is critical for labour force market as it allows people to go where jobs are and seek out best opportunities. Table 6.1 shows that 22.2% of young people migrated internally and outside the country during the five years preceded the survey. Migration has increased over time. In EICV4 the percentage of migrating youth in the preceding five years was estimated at 19.8% of the total youth population. Kigali City had the highest percentage (50.9%) of youth who migrated there in the last five years, followed by Eastern Province (20.5%). In 21-25 years age group, more female migrated internally and outside compared to males, while this is the opposite for males between 26-30 years.

The percentage of youth population migrating internally in the preceding five years increased from 18.8% in EICV4 to 21.3% in EICV5. Urban areas had the highest percentage (43.3%) of youth who migrated there in the last five years compared to rural areas (14.1%) as shown in table 6.2.

Table 6.3 presents the respondent's reasons for migrating internally or outside Rwanda. The most commonly cited reasons are related to family (33.5%) and work (51.2%). Family reasons were more predominant among migrants living in rural areas (40.9%), whereas employment reasons were more predominant among migrants living in urban areas (57.5%). Males are more likely to migrate for employment reasons (63.2%), while females are more likely to migrate for family reasons (43.5%). At the national level around 1.1% of internal migrants stated 'lack of land' as their main reason for migrating.

Work related migration increased among youth in Rwanda from 43% in 2013/14 to 51.2% in 2016/17, while migration due to family reasons decreased considerably from 43.1% down to 33.5% during the same period.

Annex C: Persons who contributed to the implementation of the EICV5**National Coordinators**

- Yusuf MURANGWA, Director General of NISR
- Ivan MURENZI, Deputy Director General of NISR

National technical Coordinator

- Dominique Habimana, Director of SMRP
- Roger KAMANA, Team Leader

Sampling Experts

- David Megill
- Roger KAMANA,

National fieldwork Coordinator

- Juvenal MUNYARUGERERO

Regional data collection Supervisors

- Jean Baptiste Serugendo
- Astrid SEGAHWEGE
- Jean Claude Nzabonimpa
- Serge Mugabo
- Alice Uwimana
- Ali Baba Mwango

Data collection IT supervisors

- Jimmy Mukasa
- Massud HARERIMANA
- Donat Nkundimana
- Jean Jacques Faustin Sharangabo
- Jean Marie Vianney NKURUNZIZA

EICV5 Data Analysis and report writing

- Didier MUHOZA

Proof reading Team

- Dr Francois Niragire
- Jean Claude Nyirimanzi
- Ruben Muhayiteto

Editing and designing Team

- Jean Claude Nyirimanzi
- Ruben Muhayiteto
- Norbert Habimana
